

Type	Structure	Use
Zero	If + present, present	General truth
First	If + present, will + verb	Real future
Second	If + past, would + verb	Unreal present/future
Third	If + past perfect, would have + V ³	Unreal past

i. The movie was interesting it had a great twist

Answer: **Run-on**

Explanation: The sentence contains two independent clauses joined without proper punctuation or a coordinating conjunction. It can be fixed in several ways, such as:

- The movie was interesting**, it had a great twist.
- The movie was interesting**, and it had a great twist.

ii. We decided to stay home because it was raining heavily

Answer: **Complete Sentence**

Explanation: This is a complex sentence with one independent clause ("We decided to stay home") and one dependent clause ("because it was raining heavily") correctly joined by a subordinating conjunction.

iii. Although he tried

Answer: **Fragment**

Explanation: This is a dependent clause starting with the subordinating conjunction "although" and lacks an independent clause to form a complete thought. It can be fixed by adding an independent clause, such as:

- Although he tried**, he could not win the race.**
-

iv. If you need help, don't hesitate to ask me

Answer: **Complete Sentence**

Explanation: This is a complex sentence with a dependent clause ("If you need help") followed by an independent clause (an imperative sentence, "don't hesitate to ask me"), correctly separated by a comma.

v. She likes tea he prefers coffee

Answer: **Run-on**

Explanation: The sentence contains two independent clauses joined without proper punctuation or a coordinating conjunction. It can be fixed in several ways, such as:

- She likes tea**, he prefers coffee.
 - She likes tea**, but** he prefers coffee.
-

vi. While walking to school

Answer: **Modifier** (specifically, a dangling or misplaced modifier/fragment)

Explanation: This is a participial phrase that is a fragment and lacks the word it is intended to modify or the independent clause it should be attached to. It can be fixed by adding an independent clause and ensuring the subject is clear, such as:

- While walking to school**, I saw a rare bird.**
-

vii. I cooked dinner my brother set the table

Answer: **Run-on**

Explanation: The sentence contains two independent clauses joined without proper punctuation or a coordinating conjunction. It can be fixed in several ways, such as:

- I cooked dinner**;** my brother set the table.
- I cooked dinner**, and** my brother set the table.

i. Helen cooked dinner therefore Ralph will wash the dishes.

Answer: **Run-on**

This is a run-on sentence because two independent clauses ("Helen cooked dinner" and "Ralph will wash the dishes") are joined only by a conjunctive adverb ("therefore") without proper punctuation (a semicolon).

- **Fixed sentence:** Helen cooked dinner; therefore, Ralph will wash the dishes.
-

ii. Our company needs to address the client's complaints we cannot afford to lose their trust.

Answer: **Run-on**

This is a run-on sentence (specifically a comma splice, though no comma is present here) because two independent clauses are joined without any punctuation or coordinating conjunction.

- **Fixed sentence:** Our company needs to address the client's complaints, or we cannot afford to lose their trust.
-

iii. Ran to the store faster than a rabbit.

Answer: **Fragment**

This is a sentence fragment because it lacks a subject. It is an incomplete thought.

- **Fixed sentence:** He ran to the store faster than a rabbit.
-

iv. I was too tired to go to the store, but the guys shopped for three hours.

Answer: **Complete Sentence**

This is a complete sentence. It contains two independent clauses joined by a comma and a coordinating conjunction ("but").

v. Since he is honest.

Answer: **Fragment**

This is a sentence fragment because it is a dependent clause beginning with the subordinating conjunction "Since". It expresses an incomplete thought.

- **Fixed sentence:** We trust him since he is honest.
-

vi. My favorite history teacher.

Answer: **Fragment**

This is a sentence fragment because it lacks a verb. It is only a noun phrase.

- **Fixed sentence:** My favorite history teacher assigned a lot of homework.
-

vii. Raffi sings upbeat children's songs he is an excellent musician.

Answer: **Run-on**

This is a run-on sentence because two independent clauses ("Raffi sings upbeat children's songs" and "he is an excellent musician") are joined without any punctuation or conjunction.

- **Fixed sentence:** Raffi sings upbeat children's songs; he is an excellent musician.

i. Our company needs to address the client's complaints we cannot afford to lose their trust.

Answer: **Run-on**

Explanation: The sentence contains two independent clauses joined without any punctuation or conjunction.

- **Revised:** Our company needs to address the client's complaints; we cannot afford to lose their trust.
-

ii. Close to the mountain.

Answer: **Fragment**

Explanation: This is a prepositional phrase without an independent clause.

- **Revised:** We were close to the mountain.
-

iii. She almost drove her kids to school every morning.

Answer: **Modifier**

Explanation: The placement of "almost" is a dangling modifier, suggesting she nearly drove but did not.

- **Revised:** She drove her kids to school almost every morning.
-

iv. As he was suffering from depression.

Answer: **Fragment**

Explanation: This is a dependent clause and cannot stand alone as a complete sentence.

- **Revised:** He stayed home as he was suffering from depression.
-

v. The experiment failed to produce the expected results the team is now considering alternative hypotheses they hope to achieve success in the next phase.

Answer: **Run-on**

Explanation: The sentence contains three independent clauses joined without proper punctuation or conjunctions.

- **Revised:** The experiment failed to produce the expected results. The team is now considering alternative hypotheses; they hope to achieve success in the next phase.
-

vi. After a long day at work, I went home, made a simple dinner, and settled onto the couch with a good book, determined to unwind and recharge for the next day.

Answer: **Complete Sentence**

vii. Hanging in the hallway, the students admired the new painting.

Answer: **Modifier**

Explanation: "Hanging in the hallway" is a misplaced modifier; it modifies "students" instead of "painting".

- **Revised:** The students admired the new painting hanging in the hallway.

Accidental Scientists

A. A paradox lies close to the heart of scientific discovery. If you know just what you are looking for, finding it can hardly count as a discovery, since it was fully anticipated. But if, on the other hand, you have no notion of what you are looking for, you cannot know when you have found it, and discovery, as such, is out of the question. In the philosophy of science, these extremes map onto the purist forms of deductivism and inductivism: In the former, the outcome is supposed to be logically contained in the premises you start with; in the latter, you are recommended to start with no expectations whatsoever and see what turns up.

B. As in so many things, the ideal position is widely supposed to reside somewhere in between these two impossible-to-realise extremes. You want to have a good enough idea of what you are looking for to be surprised when you find something else of value, and you want to be ignorant enough of your end point that you can entertain alternative outcomes. Scientific discovery should, therefore, have an accidental aspect, but not too much of one. Serendipity is a word that expresses a position something like that. It's a fascinating word, and the late Robert King Merton "the father of the sociology of science" liked it well enough to compose its biography, assisted by the French cultural historian Elinor Barber..

C. The word did not appear in the published literature until the early 19th century and did not become well enough known to use without explanation until sometime in the first third of the 20th century. Serendipity means a "happy accident" or "pleasant surprise", specifically, the accident of finding something good or useful without looking for it. The first noted use of "serendipity" in the English language was by Horace Walpole. He explained that it came from the fairy tale, called The Three Princes of Serendip (the ancient name for Ceylon, or present day Sri Lanka), whose heroes "were always making discoveries, by accidents and sagacity, of things which they were not in quest of".

D. Antiquarians, following Walpole, found use for it, as they were always rummaging about for curiosities, and unexpected but pleasant surprises were not unknown to them. Some people just seemed to have a knack for that sort of thing, and serendipity was used to express that special capacity. The other community that came to dwell on serendipity to say something important about their practice was that of scientists, and here usages cut to the heart of the matter and were often vigorously contested. Many scientists, including the Harvard physiologist Walter Cannon and, later, the British immunologist Peter Medawar, liked to emphasise how much of scientific discovery was unplanned and even accidental. One of the examples is Hans Christian Ørsted's discovery of electromagnetism when he unintentionally brought a current-carrying wire parallel to a magnetic needle. The rhetoric about the sufficiency of the rational method was so hot. Indeed, as Medawar insisted, "There is no such thing as The Scientific Method," no way at all of systematising the process of discovery. Really important discoveries had a way of showing up when they had a mind to do so and not when you were looking for them. Maybe some scientists, like some book collectors, had a happy knack; maybe serendipity described the situation rather than a personal skill or capacity.

E. Some scientists using the word meant to stress those accidents belonging to the situation; some treated serendipity as a personal capacity, many others exploited the ambiguity of the notion. Yet what Cannon and Medawar took as a benign nose-thumbing at Dreams of Method, other scientists found incendiary. To say that science had a significant serendipitous aspect was taken by some as dangerous denigration. If scientific discovery were really accidental, then what was the special basis of expert authority? In this connection, the aphorism of choice came from no less an authority on scientific discovery than Louis Pasteur: "Chance favors the prepared mind." Accidents may happen, and things may turn up unplanned and unforeseen, as one is looking for something else, but the ability to notice such events, to see potential bearing and meaning, to exploit their occurrence and make constructive use of them these are the results systematic mental preparation. What seems like an accident is just another form of expertise. On closer inspection, it is insisted, the accident dissolves into sagacity.

F. For Merton himself—who one supposes must have been the senior author—serendipity represented the keystone in the arch of his social scientific work. In 1936, as a very young man, Merton wrote a seminal essay on "The Unanticipated Consequences of Purposive Social Action." It is, he argued, the nature of social action that what one intends is rarely what one gets: Intending to provide resources for buttressing Christian religion, the natural philosophers of the Scientific Revolution laid the groundwork for secularism; people wanting to be alone with nature in Yosemite Valley wind up crowding one another. We just don't know enough—and we can never know enough to ensure that the past is an adequate guide to the future: Uncertainty about outcomes, even of our best-laid plans, is endemic. All social action, including that undertaken with the best evidence and formulated according to the most rational criteria, is uncertain in its consequences.

1.

a.

Select the most suitable headings for the given paragraphs from the list of ten headings below. Write the appropriate number I-X with paragraph list i-v in your script. There are more headings than the number of paragraphs, so you will not use them all.

For example: Paragraph G= IV

List of headings:

- i) Examples of some scientific discoveries
- ii) Varied details about what lies inside Horace Walpole's fairy tale.
- iii) Resolving the contradiction
- iv) What is the Scientific Method
- v) The contradiction of views on scientific discovery
- vi) Some misunderstandings of serendipity
- vii) Opponents of authority
- viii) Reality doesn't always match expectation
- ix) How the word 'Serendipity' came into being
- x) Illustration of serendipity in the business sector.

1. Paragraph A

2. Paragraph C

3. Paragraph D

4. Paragraph E

5. Paragraph F//Answer all the question based on the above text

Solution

1. Paragraph A → v) The contradiction of views on scientific discovery

☞ This paragraph discusses the paradox between deductivism and inductivism—two opposing views on how discoveries happen.

2. Paragraph C → ix) How the word 'Serendipity' came into being

☞ It explains the origin of the word *serendipity*, its first use by Horace Walpole, and its meaning.

3. Paragraph D → i) Examples of some scientific discoveries

☞ This paragraph gives examples (like Ørsted's discovery of electromagnetism) and discusses how scientists viewed accidental discoveries.

4. Paragraph E → vi) Some misunderstandings of serendipity

☞ It shows disagreement among scientists—whether discoveries are truly accidental or just a result of prepared expertise (Pasteur's quote).

5. Paragraph F → viii) Reality doesn't always match expectation

☞ This paragraph focuses on Merton's idea of *unanticipated consequences*, showing how outcomes often differ from intentions.
