

Major Environmental Problem in Dhaka City

Introduction : Since the Pre-Mughal era, the city of Dhaka, previously known as Dacca, has served as the center of business and growth in South Asia. After it became the capital of newly independent Bangladesh in 1971, this historic city underwent many changes, and not all of those changes were good for the environment. The term "environment" refers to the nature and surroundings in which all plants, animals, humans, and other living beings live and operate. Environmental problems arise when there are conflicts in maintaining the balance among these components. Therefore, the environmental issues in a city reflect the quality of life that its residents experience. With over 20 million people, the Dhaka metropolitan area is now the largest city in Bangladesh and the eighth most populated city in the world. Today, this megacity lies on the northern bank of the Buriganga River, positioned between 23°53' and 24°06' North latitudes, and 90°01' and 90°37' East longitudes. The living and non-living elements within Dhaka are losing the balance necessary to preserve its unique environment and sustain the living conditions for its people. Thus, it is crucial to identify the major environmental problems that have caused significant issues in this area.

Major problems :

1. .Climate Change
2. Air Pollution
3. Water Pollution
4. Solid and Hazardous Waste Mismanagement
5. .Noise/Sound Pollution
6. Waterloggin
7. Loss of Grenn spaces
8. Overpopulation
9. Unplanned Urbanization
10. Industrial Pollution
11. Traffic congestion/Jam .//Unplanned or lack of road and communication system
12. Poor public Health Conditions
13. Biodiversity and Land Degradatio

Conclusion: To address the environmental issues in Dhaka, citizens need to understand their responsibilities as community members. They have a role in protecting and improving the environment. However, the greatest responsibility lies with the administrative authorities. They must create a plan for a healthy urban lifestyle for residents. This plan should consider the advice of environmental scientists and prioritize conservation over reckless expansion. Ultimately, the success of this plan depends on proper implementation and dedication to solving Dhaka's environmental problems. Additionally, citizens should learn about the consequences of their actions and discover ways to help support a healthy environment.
