Midterm Examination, Summer 2025
Course Code: ENG-101; Course Title: English-I
Sections & Teachers: (A-N); MA, JC, SASI, MAR.

Time: 1 Hour 30 Mins

Marks: 25

Answer ALL Questions

[The figures in the right margin indicate the full marks and corresponding course outcomes. All portions of each question must be answered sequentially.]

Read the Passage Carefully and Answer the Questions that Follow:

The Need to Belong

No one likes to feel left out, ignored by colleagues at meetings or not be invited to the big party that everyone is talking about. Imagine not being part of a joke, or worse still, if the joke is on you. For most people, living the life of an outsider can have a negative effect on self-esteem and mood. It can even lead to negative behaviour. The pull to belong is extremely strong. Scientists believe that, in part, there is an evolutionary explanation for why we have this need to belong.

In the past, people hunted and cooked together in tribes and each member of the group would be assigned a role. As each member had a purpose, it meant that in the event of the loss of one person, the group as a whole would suffer. For this reason, they had a vested interest in protecting each other. To our prehistoric ancestors, membership of a group meant the difference between survival and death. Those who were rejected and excluded from joining a group had to fend for themselves and struggled to stay alive alone in the wild. Apart from protection, being part of a group also ensured that genes could be passed onto future generations. Although it is very different now from the way our primitive ancestors lived, our brains have not had time to evolve to fit today's lifestyles. In this day and age, it is no longer a matter of survival to be affiliated to a tribe or group, but the evolutionary instinct to find protection still lingers.

This inherent feeling of security that comes with being part of a group is powerful enough to make people employ both conscious and unconscious strategies to gain membership. One obvious way people try to be accepted into a group is self-presentation, which is the act of portraying yourself in the best possible light. An individual will attempt to outwardly display the characteristics which are important to the group's advancement. At the same time, they will conceal any parts of their personality that may be seen as undesirable or not useful to a group. An example of self-presentation is the job application process. A candidate applying for a job will promote themselves as motivated, but is likely to hide the fact that they are disorganised. These conscious tactics that people use are not a surprise to anyone, but we also use other strategies unknowingly.

Psychologists Jessica Larkin, Tanya Chartrand and Robert Arkin suggested that people often resort to automatic mimicry to gain affiliation into groups, much like our primitive ancestors used to do. Before humans had the ability to speak, physical imitation was a method of begging for a place in the group. Most will be unaware they are doing it. Larkin and her co-

workers decided to test this hypothesis. They took a group of student volunteers and had them play a game called Cyberball, a ball tossing arcade game that resembled American football. The volunteers were led to believe they were all playing against each other, but in actual fact they were not.

The computer was manipulating the game by passing the ball to some volunteers and excluding others. The 'accepted' and 'rejected' students were then asked if they enjoyed the game and about their opinions of the other players. Participants were then put alone in a room and their natural foot movements were filmed. Then a female entered the room under the pretense of conducting a fake photo description task. The female deliberately moved her foot during the task, but not in a way that would be noticeable to the volunteer. It turned out that the rejected students mimicked the female's foot movements the most. This revealed that after exclusion, people will automatically mimic to affiliate with someone new.

However, Larkin and her colleagues wanted to go further. They believed that more often than not, in the real world, we actually know the people that reject us. How do we behave towards the group that we know has excluded us? The experiment was repeated with this question in mind. In the second experiment, only female volunteers played the Cyberball game, during which they experienced rejection by either men or women. Then each volunteer did the fake photo task, but this time with a man and then a woman. The results clearly indicated that the female students that felt rejected would unconsciously make more of an effort to mimic members of their own in-group – that is, other women – rather than men. This deep-wired instinct to mimic was not only directed towards random people, as initially thought, but targeted to specific groups, the particular group that did the rejecting in the first place.

To some, it is inconceivable why people will go to great lengths to be accepted into one of life's social groups or clubs, enduring rejection and sometimes humiliation in order to be accepted. You only have to look at college campuses, which are notorious for strict initiations inflicted on candidates desperately seeking membership. But it happens and will continue to happen, because the desire to belong is a very powerful force and a fundamental part of human nature.

1	a.	Select the information to complete the flowchart below. Don't write MORE THAN TWO WORDS from the passage for each answer. The Evolution of Belonging and Group Behaviour People in the past lived in tribes, where each person had a (i) _____ to ensure the group's survival. People were interested in protecting each other as their own survival came on the line if one member of the group was dead. People who were excluded, had to survive (ii) _____ which was much harder. Today, although group membership is not essential for survival, the (iii) _____ for protection remains.	[4x0.5=2]	CLO- 3 Level- C4
---	----	--	-----------	---------------------

	People tend to hide parts of their (iv) _____ not useful to a group.		
	b. Classify the following statements as True/False/Not Given based on your reading of the passage. i. According to Many, not being a part of the group takes a heavy toll on their confidence. ii. Back in the ancient times, being or not being a part of a group didn't matter when it came to life and death. iii. The volunteers in the experiment were led to believe that they were not playing a role against each other in reality. iv. Larkin and other scientists believed that more often than not, in the real world, whether to not be rejected by people is a choice we have, we can opt for what we want. v. The urge to belong is increasing now as we are in the social media era where real connections are fading gradually.	[5x1=5]	
2	a. Identify an appropriate article (a/an/the/put cross for no article) to fill in the gaps. When I was (i) _____ child, I dreamt of becoming (ii) _____ explorer. I loved reading books about ancient civilizations and imagining myself discovering (iii) _____ hidden treasure in the jungle. Last year, I had a chance to visit (iv) _____ Peru and see (v) _____ ruins of Machu Picchu. It was truly a remarkable experience. I joined (vi) _____ group of tourists led by an experienced guide who told us stories about (vii) _____ Inca Empire. We walked for hours through (viii) _____ dense forest, crossed rivers, and climbed steep paths to reach the top of the mountain. Along the way, we spotted (ix) _____ variety of birds and plants I had never seen before. Although I enjoyed the whole trip, I became sick and was admitted to (x) local hospital. Eventually, it felt like stepping back in time, into the world of mystery and wonder.	[0.5x10=5]	CLO- 1 Level- C1
	b. Write the correct form of the verb in the brackets to complete the following sentences. i. Every morning, she (go) to the park for a walk. ii. They (finish) the project before the deadline last week. iii. I (not/see) him since we left school. iv. When we arrived at the station, the train (already/leave). v. Right now, the children (play) in the garden.	[5x1=5]	
3	Construct a paragraph on any one of the following topics: 1. Your City 2. A memorable Journey	[1x8=8]	CLO- 4 Level- C3

Midterm Examination, Summer 2025; Course Code: SE 113;

Course Title: Introduction to Software Engineering

Sections & Teachers: 45 (A-N) & MKS, RM, MIF, KMH, ZNM, MMN, FMD, MTM

Time: 1:30 Hrs

Marks: 25

Answer ALL Questions

[The figures in the right margin indicate the full marks and corresponding course outcomes. All portions of each question must be answered sequentially.]

1.	a)	A company is developing a new e-commerce platform but is facing issues like unclear requirements, frequent changes, tight deadlines, and third-party integration problems. Based on this scenario, briefly discuss the basic challenges commonly faced in software development.	[Marks-4]	CLO-1 Level-2
	b)	A software company receives two projects from different clients. One project has well-defined, stable requirements and a fixed timeline, while the other has evolving requirements and needs continuous user feedback throughout the development process. Depending on the scenario, distinguish between Adaptive (Agile) and Predictive (Waterfall) software development approaches.	[Marks-5]	
	d)	Describe the important characteristics that are necessary for high-quality software with details.	[Marks-5]	
	e)	For any software project, elaborate the advantages and disadvantages of using the XP model in software development.	[Marks-4]	
2.	a)	A new system for farming is to be developed from the scratch (starting), therefore lots of activities - from collecting requirement from the farmers, acquiring team, planning, scheduling, cost calculating, managing people to motivate team members - would have to be carried out. This is a huge project which would be given enough <u>flexibilities</u> to develop your team and to acquire other resources (e.g. human or machines). However, the users of the system are expecting quick implementation of it within <u>three</u> months and the main stakeholders do not have enough idea about the final software and functions, few experts' think huge change of requirements would be unavoidable with time frame. You may invent other information as necessary. Based on this scenario, determine a suitable Software Development Life Cycle (SDLC) model that will be the best choice for this project with clear reasoning.	[Marks-4]	CLO-2 Level-3
	b)	According to the answer of Question 2a, Demonstrate each phases that specifically addresses the needs and challenges of the SDLC model.	[Marks-3]	

1-4 marks

Course Code: SE 111; Course Title: Computer Fundamentals

Sections & Teachers: MIM(A,B), SI(C,D, E), MH(F, G), MIF(H), KFH (I), SHN (J), AAS (K), SAR (L), MS (M), DDK (N)

Time: 1 Hour 30 Mins

Marks: 25

Answer ALL Questions

[The figures in the right margin indicate the full marks and corresponding course outcomes. All portions of each question must be answered sequentially.]

1.	a) Zebon works in the IT department of a university. He sets up a new server that uses RAID support to store important student data. One day, one of the hard drives fails, but the system keeps running smoothly without any data loss. Zebon explains that because of RAID, the data is safely mirrored across multiple drives, allowing the server to continue operating without interruption. Explain the generation of computer mentioned in the above scenario with its other hardware and software technologies.	[Marks-3]	CLO-1 C2
	b) Raihan logs into his university portal for the first time today. It takes a while the system verifies his credentials, loads his dashboard and displays his personalized content. Later he logs out and logs back in again within a few minutes. This time, everything loads almost instantly his profile, recent activity and course list are all ready as the system is using that type of memory which stores frequently used data. Explain the above-mentioned memory with proper diagram.	[Marks-3]	
	c) i) Convert 717_9 to its Base 4 equivalent Number. ii) Convert 1001111.11101_2 to its Base 10 equivalent Number. iii) Convert 1355_{13} to its Base 8 equivalent Number.	[Marks-9]	
2.	a) Illustrate a logic circuit for the following Boolean expression. $F = \bar{A}(\bar{A}\bar{C} + C) + \bar{A}\bar{C} + AB(\bar{B}\bar{C}) + AC$	[Marks-2]	CLO-2 C4
	b) Identify the final output for the below logic circuit diagram also simplify the output result and prove your simplification using truth table. 	[Marks-8]
