

Binary Tree Traversals

In-order Traversal (LNR - Left-Node-Right):

1. Traverse the left-subtree of R in in-order
2. Process the root R (here R is respective root node)
3. Traverse the right-subtree of R in in-order
4. Example: D B E F A G C L J H K

Preorder Traversal (NLR - Node-Left-Right):

1. Process the root R
2. Traverse the left-subtree of the R preorder
3. Traverse the right-subtree of R preorder
4. Example: A B D E F C G H J L K

Post-order Traversal (LRN - Left-Right-Node):

1. Traverse the left-subtree of R in post-order
2. Traverse the right sub-tree of R in post-order
3. Process the root R
4. Example: D F E B G L J K H C A
